

I design where space, systems, and people meet.

I trained as an architect, then spent five years in UX for booking and e-commerce. Both trades ask one question: who can get in.

For the last three years I have been building. I take a product from the first sketch to something running in production, with AI carrying the repetitive work and **the decisions staying mine.**

That is what I bring to a team, along with what I learn as I go. The routine part gets faster, which returns the hours to research, to the people a product is for, and to ideas that need more than a template. What is left is the part that was always the hard part: understanding people, and making sure everyone can use the result. I **want to do that somewhere an accessible internet counts as a value.**

— PRACTICE

2023 – CURRENT

BUILDING WITH AI — BETWEEN THE LINES

- A journalling product taken to production: accounts and authorisation, subscriptions and payments, semantic search across a person's own entries, and an interface a keyboard alone can drive.
- Led the build from architecture through acceptance, with AI as the accelerator throughout. Built without a traditional engineering handoff.
- AI across the whole product lifecycle: ideation, research synthesis, prototyping, and evaluation.
- Design happens in code now: components built and reviewed in the browser. Figma carries the documentation and the handover.
- Live today, with **47 automated checks** and accessibility and performance gates on every build.

ACCESSIBILITY — THIRTEEN WCAG REVIEWS OF NORWEGIAN WEBSITES

- Public and private sector. Four confirmed WCAG 2.1 AA failures and one judgement call in each, with the repair written beside every finding.
- Confirmed by hand in the browser: keyboard passes for focus order and visibility, contrast against the composed background, reflow at 320 px. What was not tested is named.
- In my own code: a drag target rebuilt as a real slider with arrow keys and a value read out in words, a live region for the assistant's typing indicator, accessible names from visible text, and **Lighthouse accessibility 100 on every page.**

— EXPERIENCE

Nowa Itaka / Axabee — in-house product studio

2018 – 2023

Promoted from UX & Researcher to UX & Interface Designer

RESABEE — BOOKING PLATFORM, 1.4M RESERVATIONS A YEAR

- Led UX/UI end to end: workshops with tour operators and agencies, user interviews, personas, journey maps.
- Information architecture and flows for complex booking work, from wireframes and prototypes to detailed solutions in Figma, presented to the management board.
- Built and maintained the design-system components, and ran design QA with the developers through implementation.

ITAKA 3.0 — E-COMMERCE PLATFORM REDESIGN

- Multi-method research: 15+ in-depth interviews on prototypes, contextual interviews with agency staff, field observation, A/B testing and surveys, synthesised into the service audit that set the direction for the redesign.
- Designed a package-customisation system, validated in usability testing: **20% higher average cart value.**
- Rebuilt the critical paths with engineering after a UX audit: **0.3s load time, 50% higher mobile conversion.**

REPAPP — TABLET APPLICATION FOR FIELD SERVICE

- Owned the service design end to end: field research with tour representatives, MVP defined in prioritisation workshops, tablet prototypes, usability testing at airports, real-time chat and video.
- **50% less waiting time at the airport, 30% less office work.**

ITAKA APP — IOS AND ANDROID

- Heuristic evaluation and competitive analysis, then new search and filtering. **Mobile Trends Award, 210% YoY sales, 4.7/5 on Google Play.**

Vita Management

2016 – 2018 · ARCHITECT

- Paths not plans: audited oncological hospital complexes through a service lens, mapping patient journeys and staff flows across departments. Recommendations improved service efficiency and the patient experience, and the audit let the hospital apply for funding.
- **Accessible design in a protected heritage building**: designed routes into parts people with disabilities could not reach, inside what conservation allows.
- Renovation of medical clinics and pharmacies, and heritage revaluation of industrial buildings, bringing conservation practice together with human-centred design. Drawings and recommendations.

— EDUCATION & TRAINING

AI Product Masterclass — [Nueve](#)

2026 · 5 WEEKS · 45 LESSONS · WORKSHOP-BASED

- Static design turned into working web and mobile applications with AI-assisted editors.
- Choosing language models for a business problem, context engineering and prompting.
- AI agents, automated workflows, and AI-assisted discovery.
- Assessed on a product built and shipped during the programme, which the instructor named **one of the best and most finished pieces of work in the cohort**.
